

Team Number / Team Name: Clankers

Category	Excellent (3 Points)	Good (2 Points)	Fair(1 Points)	Poor(0)
Features Implemented 3	- All required features are present and beyond that, additional innovative features have been added. - Seamless integration of components	- Most required features are present with minor omissions. - Some extra features may be included, though integration could be improved.	- Basic functionality is met but several key features are missing or underdeveloped. - Limited innovation or extension beyond requirements.	- Core features are missing or incomplete. - Little to no extra features; poor integration and lack of functionality.
Implementing Tests 3	- Comprehensive testing: includes unit, integration, and system tests with high coverage. - Tests are well-organized, documented, and effective.	- Adequate test suite: covers most functionalities. - Tests are structured and generally reliable, though some edge cases might be missed.	- Limited test coverage: tests exist but may not thoroughly cover critical paths or edge cases. - Documentation and organization are lacking.	- Minimal or no tests implemented: very little automation or coverage, making it difficult to verify the software's reliability and correctness.
Quality of Code 2	- Exceptionally clean and modular code: adheres strictly to coding standards and best practices. - Thoroughly documented and easy to maintain.	- Good quality code: generally clear, readable, and adequately documented. - Follows most best practices with minor inconsistencies.	- Mediocre code quality: functional but with inconsistent style, sparse documentation, and noticeable maintainability issues. - Refactoring needed.	- Poorly written code: disorganized, hard to read, and lacking necessary documentation. - Little to no adherence to coding standards or best practices.

Total Grade: 8
